DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 3761

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1 and 3-8 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 4, 5, and 6 of U.S. Patent No. 6,709,412 to Va dlik et al. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instantly claimed invention is a broader recitation of the patented device. In particular, both inventions claim a source of cells comprising a donor flow channel, a component collection flow channel, a blood cell storage container, in-line flexible leukocyte filter with a filter medium, a pump station, and a restraining structure to restrain expansion of the filter housing during pump operations. With regard to claim 8, it is the position of the Examiner that the '412 patent comprises all the elements of the claimed structure and suggests the method claimed by applicant, rendering the instantly claimed method unpatentable over the suggestion of the '412 patent. Since the instant application claims all the elements of the prior patent, it is patentably indistinguishable from the '412 patent.

Allowable Subject Matter

3. Claims 1 and 3-8 are objected to as being rejected under double patenting (see above), but would be allowable upon submission of a proper Terminal Disclaimer.
4. The following is a statement of reasons for the indication of allowable subject matter: The prior art fails to disclose or suggest the apparatus and method claimed by

Art Unit: 3761

applicant. The best prior art of record, US 5,649,903 to Deniega and US 5,591,337 to Lynn teach a blood processing system substantially as claimed by applicant including a flexible leukofilter, but fail to disclose or suggest a separate restraining structure disposed about the flexible filter along with the other steps and limitations of the claims. While filter restraints are known in the art, the prior art filter restraints are designed to restrain a flexible or migrating filter material itself—the prior art restraints are not disposed around a flexible filter housing, as claimed by applicant.

Conclusion

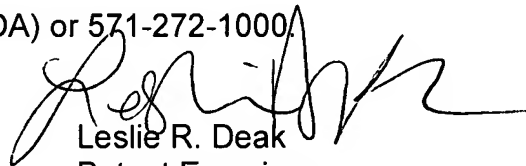

5. Examiner has presented new grounds of rejection which were not set forth in the prior office action. Accordingly, the instant action is non-final.
